

Engineering company for process technology

oilRoq is a highly specialized engineering company equipped with a wealth of experience. We design, manufacture and deliver components and entire process plants for the Oleo-Chemical Industry, Vegetable Oil Industry and specially designed apparatuses mainly focusing on:

- Hydrogenation plants for vegetable oils, fats and fatty acids
- Interesterification plants for vegetable oils, fats and fatty acids
- Esterification plants for vegetable oils and fats
- Filtration plants
- Tank reactor technology
- Oil seeds crushing plants
- Vegetable oil refining plants
- Components for all a.m. plants

Engineering company for process technology

oilRoq provides as service company:

- Supervision of your project from concept to commissioning
- Supply of complete plants
- Modernisation of your existing plants
- Supply of engineering only, permitting you to make maximum use of products of the local market
- Technical support and training
- Safety expertise in hydrogenation technology

Applied software during engineering work

- **Autodesk Inventor** for design of appliance
- **Autodesk Plant 3D** for design of lay out plans and P&I diagrams
- **Autodesk AutoCAD** for design of flow diagrams
- Computer programs for heat exchanger lay out
- Computer programs for pump dimensioning
- Access to ChemCad-process simulation for lay out of thermal processes
